DETAILED ACTION

Claim Objections

1. Claims 6, 7, 12-19, 21-42 and 47-52 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits. Accordingly, these claims were not included in the Election/Restriction requirement.

Election/Restrictions

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- Group I, claim(s) 1-5, drawn to a process for producing recombinant albumin, the process comprising culturing a fungal cell expressing a recombinant albumin and obtaining the albumin. The cell has a genetic modification which causes the cell to have reduced capacity for mannosylation.
- Group II, claim(s) 8-11, drawn to a process for purifying albumin solution, the process comprising subjecting a first albumin solution of pH 8.0-9.5 and conductivity in the range of 1 to 75 mS.cm⁻¹ to an affinity chromatography step which is run in a negative mode with respect to the albumin and which utilizes an affinity matrix comprising immobilized dihydroxyboryl groups.
- Group III, claim(s) 20, 43 and 44, drawn to a process for purifying an albumin solution, the process comprising cation exchange chromatography followed by anion exchange chromatography, or anion exchange chromatography followed by cation exchange

Art Unit: 1637

chromatography, where the albumin solution from the second chromatographic step does not undergo further purification.

- Group IV, claim(s) 45 and 46, drawn to a process for reducing level of nickel ions in albumin solution, the process comprising subjecting albumin solution to a pH 2.5-7.5, preferably 4.0-6.0 and removing nickel ions.
- Group V, claim(s) 53, drawn to a DNA sequence, plasmid or cell which comprises a recombinant albumin coding sequence, wherein the 3' end of the recombinant albumin coding sequence comprises two or more in-frame translation stop codons.

3. The inventions listed as Groups I-V do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: WO 94/04687 teaches a method for the production of human serum albumin in fungal cells with at least reduced capacity for O-mannosylation due to genetic modification of genes involved in the process.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
